

Payment Card Industry Data Security Standard

Self-Assessment Questionnaire D for Service Providers and Attestation of Compliance

For use with PCI DSS Version 4.0

Revision 1

Publication Date: December 2022

Document Changes

Date	PCI DSS Version	SAQ Revision	Description
October 2008	1.2		To align content with new PCI DSS v1.2 and to implement minor changes noted since original v1.1.
October 2010	2.0		To align content with new PCI DSS v2.0 requirements and testing procedures.
February 2014	3.0		To align content with PCI DSS v3.0 requirements and testing procedures and incorporate additional response options.
April 2015	3.1		Updated to align with PCI DSS v3.1. For details of PCI DSS changes, see PCI DSS – Summary of Changes from PCI DSS Version 3.0 to 3.1.
July 2015	3.1	1.1	Updated to remove references to "best practices" prior to June 30, 2015, and remove the PCI DSS v2 reporting option for Requirement 11.3.
April 2016	3.2	1.0	Updated to align with PCI DSS v3.2. For details of PCI DSS changes, see PCI DSS – Summary of Changes from PCI DSS Version 3.1 to 3.2.
January 2017	3.2	1.1	Updated version numbering to align with other SAQs.
June 2018	3.2.1	1.0	Updated to align with PCI DSS v3.2.1. For details of PCI DSS changes, see PCI DSS – Summary of Changes from PCI DSS Version 3.2 to 3.2.1.
April 2022	4.0		Updated to align with PCI DSS v4.0. For details of PCI DSS changes, see PCI DSS – Summary of Changes from PCI DSS Version 3.2.1 to 4.0.
			Rearranged, retitled, and expanded information in the "Completing the Self-Assessment Questionnaire" section (previously titled "Before You Begin").
			Aligned content in Sections 1 and 3 of Attestation of Compliance (AOC) with PCI DSS v4.0 Report on Compliance AOC.
			Added Section 2a to the Self-Assessment Questionnaire to specify additional documentation required for service provider self-assessments.
			Added "Describe Results" to Section 2b (previously Section 2) for each PCI DSS requirement, for service providers to describe their testing results.
			Added appendices to support new reporting responses.
December 2022	4.0	1	Removed "In Place with Remediation" as a reporting option from Requirement Responses table, Attestation of Compliance (AOC) Part 2g, SAQ Section 2 Response column, and AOC Section 3. Also removed former Appendix C.
			Added "In Place with CCW" to AOC Section 3.
			Added guidance for responding to future-dated requirements.
			Added minor clarifications and addressed typographical errors.

Completing the Self-Assessment Questionnaire

Service Provider Eligibility Criteria for Self-Assessment Questionnaire D

Self-Assessment Questionnaire (SAQ) D for Service Providers applies to all service providers defined by a payment brand as being eligible to complete a self-assessment questionnaire.

This SAQ is the ONLY SAQ option for service providers.

Defining Account Data, Cardholder Data, and Sensitive Authentication Data

PCI DSS is intended for all entities that store, process, or transmit cardholder data (CHD) and/or sensitive authentication data (SAD) or could impact the security of the cardholder data environment (CDE). Cardholder data and sensitive authentication data are considered account data and are defined as follows:

Account Data			
Cardholder Data includes:	Sensitive Authentication Data includes:		
 Primary Account Number (PAN) Cardholder Name Expiration Date Service Code 	Full track data (magnetic-stripe data or equivalent on a chip) Card verification code PINs/PIN blocks		

Refer to PCI DSS Section 2, PCI DSS Applicability Information, for further details.

PCI DSS Self-Assessment Completion Steps

- 1. Per the eligibility criteria in this SAQ and as spelled out in the Self-Assessment Questionnaire Instructions and Guidelines document on PCI SSC website, this SAQ is the ONLY SAQ OPTION for service providers.
- 2. Confirm that the service provider environment is properly scoped.
- 3. Assess environment for compliance with PCI DSS requirements.
- 4. Complete all sections of this document:
 - Section 1: Assessment Information (Parts 1 & 2 of the Attestation of Compliance (AOC) Contact Information and Executive Summary).
 - Section 2:
 - 2a Details about Reviewed Environment.
 - o 2b Self-Assessment Questionnaire D for Service Providers.
 - Section 3: Validation and Attestation details (Parts 3 & 4 of the AOC PCI DSS Validation and Action Plan for Non-Compliant Requirements (if Part 4 is applicable)).
- 5. Submit the SAQ and AOC, along with any other requested documentation—such as ASV scan reports—to the requesting organization (those organizations that manage compliance programs such as payment brands and acquirers).

Expected Testing

The instructions provided in the "Expected Testing" column are based on the testing procedures in PCI DSS and provide a high-level description of the types of testing activities that an entity is expected to perform to verify that a requirement has been met.

The intent behind each testing method is described as follows:

- Examine: The entity critically evaluates data evidence. Common examples include documents (electronic or physical), screenshots, configuration files, audit logs, and data files.
- Observe: The entity watches an action or views something in the environment. Examples of
 observation subjects include personnel performing a task or process, system components performing
 a function or responding to input, environmental conditions, and physical controls.
- Interview: The entity converses with individual personnel. Interview objectives may include confirmation of whether an activity is performed, descriptions of how an activity is performed, and whether personnel have particular knowledge or understanding.

The testing methods are intended to allow the entity to demonstrate how it has met a requirement. The specific items to be examined or observed and personnel to be interviewed should be appropriate for both the requirement being assessed and the entity's particular implementation.

Full details of testing procedures for each requirement can be found in PCI DSS.

Requirement Responses

For each requirement item, there is a choice of responses to indicate the entity's status regarding that requirement. *Only one response should be selected for each requirement item.*

A description of the meaning for each response and how to report the testing performed is provided in the table below:

Response	When to use this response:	Service Provider Required Reporting		
In Place	The expected testing has been performed, and all elements of the requirement have been met as stated.	Briefly describe how the testing and evidence demonstrates the requirement is In Place.		
In Place with CCW (Compensating	The expected testing has been performed, and the requirement has been met with the assistance of a compensating control.	Briefly describe which aspect(s) of the requirement where a compensating control(s) was used.		
Controls Worksheet)		All responses in this column also require completion of a Compensating Controls Worksheet (CCW) in Appendix B of this SAQ.		
		Information on the use of compensating controls and guidance on how to complete the CCW is provided in PCI DSS Appendices B and C.		
Not Applicable	The requirement does not apply to the entity's environment. (See "Guidance for Not Applicable Requirements" below for examples.)	Briefly describe the results of testing performed that demonstrate the requirement is Not Applicable.		
		All responses in this column also require a supporting explanation in Appendix C of this SAQ.		
Not Tested	The requirement was not included for consideration in the assessment and was not	Briefly describe why this requirement was excluded from the assessment.		
	tested in any way. (See "Understanding the Difference between Not Applicable and Not Tested" below for examples of when this option should be used.)	All responses in this column also require a supporting explanation in Appendix D of this SAQ.		
Not in Place	Some or all elements of the requirement have not been met, or are in the process of being	Briefly describe how the testing and evidence demonstrates the requirement is Not in Place.		
	implemented, or require further testing before the entity can confirm they are in place. This response is also used if a requirement cannot be met due to a legal restriction. (See "Legal Exception" below	Responses in this column may require the completion of Part 4, if requested by the entity to which this SAQ will be submitted.		
	for more guidance).	If the requirement is not in place due to a legal restriction, describe the statutory law or regulation that prohibits the requirement from being met and complete the relevant attestation in Part 3 of this SAQ.		

Guidance for Not Applicable Requirements

While many entities completing SAQ D will need to validate compliance with every PCI DSS requirement, some entities with very specific business models may find that some requirements do not apply. For example, entities that do not use wireless technology in any capacity are not expected to comply with the PCI DSS requirements that are specific to managing wireless technology. Similarly, entities that do not store any account data electronically at any time are not expected to comply with the PCI DSS requirements related to secure storage of account data (for example, Requirement 3.5.1). Another example is requirements specific to application development and secure coding (for example, Requirements 6.2.1 through 6.2.4), which only apply to an entity with bespoke software (developed for the entity by a third party per the entity's specifications) or custom software (developed by the entity for its own use).

For each response where Not Applicable is selected in this SAQ, complete Appendix C: Explanation of Requirements Noted as Not Applicable.

Understanding the Difference between Not Applicable and Not Tested

Requirements that are deemed to be not applicable to an environment must be verified as such. Using the wireless example above, for an entity to select "Not Applicable" for Requirements 1.3.3, 2.3.1, 2.3.2, and 4.2.1.2, the entity first needs to confirm that there are no wireless technologies used in their cardholder data environment (CDE) or that connect to their CDE. Once this has been confirmed, the organization may select "Not Applicable" for those specific requirements.

If a requirement is completely excluded from review without any consideration as to whether it *could* apply, the Not Tested response should be selected. Examples of situations where this could occur include:

- An entity is asked by their acquirer to validate a subset of requirements—for example, using the PCI DSS Prioritized Approach to validate only certain milestones.
- An entity is confirming a new security control that impacts only a subset of requirements—for example, implementation of a new encryption methodology that only requires assessment of PCI DSS Requirements 2, 3, and 4.
- A service provider organization offers a service which covers only a limited number of PCI DSS requirements—for example, a physical storage provider that is only confirming the physical security controls per PCI DSS Requirement 9 for their storage facility.

In these scenarios, the entity's assessment only includes certain PCI DSS requirements even though other requirements might also apply to their environment.

If any requirements are completely excluded from the entity's self-assessment, select Not Tested for that specific requirement, and complete Appendix D: Explanation of Requirements Not Tested for each Not Tested entry. An assessment with any Not Tested responses is a "Partial" PCI DSS assessment and will be noted as such by the entity in the Attestation of Compliance in Section 3, Part 3 of this SAQ.

Guidance for Responding to Future Dated Requirements

In Section 2 below, each new PCI DSS v4.0 requirement or bullet with an extended implementation period includes the following note: "This requirement [or bullet] is a best practice until 31 March 2025, after which it will be required and must be fully considered during a PCI DSS assessment."

These new requirements are not required to be included in a PCI DSS assessment until the future date has passed. Prior to that future date, any new requirements with an extended implementation date that have not been implemented by the entity may be marked as Not Applicable and documented in *Appendix C: Explanation of Requirements Noted as Not Applicable*.

Legal Exception

If your organization is subject to a legal restriction that prevents the organization from meeting a PCI DSS requirement, select Not in Place for that requirement and complete the relevant attestation in Section 3, Part 3 of this SAQ.

Note: A legal restriction is one where meeting the PCI DSS requirement would violate a local or regional law or regulation.

Contractual obligations or legal advice are not legal restrictions.

Use of the Customized Approach

SAQs cannot be used to document use of the Customized Approach to meet PCI DSS requirements. For this reason, the Customized Approach Objectives are not included in SAQs. Entities wishing to validate using the Customized Approach may be able to use the PCI DSS Report on Compliance (ROC) Template to document the results of their assessment.

Use of the Customized Approach is not supported in SAQs.

The use of the customized approach may be regulated by organizations that manage compliance programs, such as payment brands and acquirers. Questions about use of a customized approach should always be referred to those organizations. This includes whether an entity that is eligible for an SAQ may instead complete a ROC to use a customized approach, and whether an entity is required to use a QSA, or may use an ISA, to complete an assessment using the customized approach. Information about the use of the Customized Approach can be found in Appendices D and E of PCI DSS.

Additional PCI SSC Resources

Additional resources that provide guidance on PCI DSS requirements and how to complete the self-assessment questionnaire have been provided below to assist with the assessment process

Resource	Includes:		
PCI DSS	Guidance on Scoping		
(PCI Data Security Standard Requirements and Testing Procedures)	 Guidance on the intent of all PCI DSS Requirements Details of testing procedures Guidance on Compensating Controls Appendix G: Glossary of Terms, Abbreviations, and Acronyms 		
SAQ Instructions and Guidelines	 Information about all SAQs and their eligibility criteria How to determine which SAQ is right for your organization 		
Frequently Asked Questions (FAQs)	Guidance and information about SAQs.		
Online PCI DSS Glossary	PCI DSS Terms, Abbreviations, and Acronyms		
Information Supplements and Guidelines	 Guidance on a variety of PCI DSS topics including: Understanding PCI DSS Scoping and Network Segmentation Third-Party Security Assurance Multi-Factor Authentication Guidance Best Practices for Maintaining PCI DSS Compliance 		
Getting Started with PCI	 Resources for smaller merchants including: Guide to Safe Payments Common Payment Systems Questions to Ask Your Vendors Glossary of Payment and Information Security Terms PCI Firewall Basics 		

These and other resources can be found on the PCI SSC website (www.pcisecuritystandards.org).

Organizations are encouraged to review PCI DSS and other supporting documents before beginning an assessment.

Section 1: Assessment Information

Instructions for Submission

This document must be completed as a declaration of the results of the entity's self-assessment against the *Payment Card Industry Data Security Standard (PCI DSS) Requirements and Testing Procedures.* Complete all sections: The entity is responsible for ensuring that each section is completed by the relevant parties, as applicable. Contact the entity(ies) to which the Attestation of Compliance (AOC) will be submitted for reporting and submission procedures.

Part 1. Contact Informati	on

☐ Billing Management	☐ Loyalty Programs	[Records Management		
☐ Clearing and Settlement	☐ Merchant Services]	☐ Tax/Government Payments		
☐ Network Provider					
Others (specify):					
Provide a brief explanation why any checked services were not included in the assessment:					
Part 2b. Description of Role with Payment Cards					
Describe how the business stores, and/or transmits account data.	processes,				
Describe how the business is other or has the ability to impact the secucustomers' account data.					
Describe system components that of security of account data.	could impact the				

Part 2c. Description of Payment Card Environment

Provide a *high-level* description of the environment covered by this assessment.

For example:

- Connections into and out of the cardholder data environment (CDE).
- Critical system components within the CDE, such as POI devices, databases, web servers, etc., and any other necessary payment components, as applicable.
- System components that could impact the security of account data.

Indicate whether the environment includes segmentation to reduce the scope of	☐ Yes ☐ No
the assessment.	
(Refer to "Segmentation" section of PCI DSS for guidance on segmentation.)	

Part 2d. In-Scope Locations/Facilities

List all types of physical locations/facilities (for example, corporate offices, data centers, call centers, and mail rooms) in scope for the PCI DSS assessment.

Facility Type	Total number of locations (How many locations of this type are in scope)	Location(s) of facility (city, country)
Example: Data centers	3	Boston, MA, USA

Part 2e. PCI SSC Validated Products and Solutions

Does the entity use any item identified on any PCI SSC Lists of Validated Products and Solutions*?
☐ Yes ☐ No
Provide the following information regarding each item the entity uses from PCI SSC's Lists of Validated

Products and Solutions.

Name of PCI SSC
Version of Which product or Whi

Expiry date of which product or validated Product or **Product or** reference listing solution was Solution Solution number (YYYY-MM-DD) validated YYYY-MM-DD YYYY-MM-DD YYYY-MM-DD YYYY-MM-DD YYYY-MM-DD YYYY-MM-DD YYYY-MM-DD YYYY-MM-DD YYYY-MM-DD

For purposes of this document, "Lists of Validated Products and Solutions" means the lists of validated products, solutions, and/or components appearing on the PCI SSC website (www.pcisecuritystandards.org)—for example, 3DS Software Development Kits, Approved PTS Devices, Validated Payment Software, Payment Applications (PADSS), Point to Point Encryption (P2PE) solutions, Software-Based PIN Entry on COTS (SPoC) solutions, and Contactless Payments on COTS (CPoC) solutions.

, and an

Section 2a: Details about Reviewed Environment

Network Diagrams

Provide one or more network diagrams that:

- Shows all connections between the CDE and other networks, including any wireless networks.
- Is accurate and up to date with any changes to the environment.
- Illustrates all network security controls that are defined for connection points between trusted and untrusted networks.
- Illustrates how system components storing cardholder data are not directly accessible from the untrusted networks.
- Includes the techniques (such as intrusion-detection systems and/or intrusion-prevention systems) that are in place to monitor all traffic:
 - At the perimeter of the cardholder data environment.
 - At critical points in the cardholder data environment.

Storage of Account Data

Identify all databases, tables, and files storing account data and provide the following details.

Data Store Database name, file server name, etc.	File name(s), Table names(s) and/or Field names	Account data elements stored For example, PAN, expiry, name, etc.	How data is secured For example, what type of encryption and strength, etc.	How access to data stores is logged Description of logging mechanism used for logging access to data— for example, describe the enterprise log management solution, application-level logging, operating system logging, etc. in place

Storage of SAD

Identify all databases, tables, and files storing Sensitive Account Data (SAD) and provide the following details.

Note: The list of files and tables that SAD in the table below must be supported by an inventory created (or obtained from the assessed entity) and retained by the assessor in the workpapers.

Data Store Database name, file	File name(s), Table names(s) and/or Field names	Is SAD stored pre- authorization?		Is SAD stored as part of Issuer Functions?		How data is secured
server name, etc.		Yes	No	Yes	No	For example, what type of encryption and strength, etc.

In-scope System Component Types

Identify all types of system components in scope.

"System components" include network devices, servers, computing devices, virtual components, cloud components, and software. Examples of system components include but are not limited to:

- Systems that store, process, or transmit account data (for example, payment terminals, authorization systems, clearing systems, payment middleware systems, payment back-office systems, shopping cart and store front systems, payment gateway/switch systems, fraud monitoring systems).
- Systems that provide security services (for example, authentication servers, access control servers, security information and event management (SIEM) systems, physical security systems (for example, badge access or CCTV), multi-factor authentication systems, anti-malware systems).
- Systems that facilitate segmentation (for example, internal network security controls).
- Systems that could impact the security of account data or the CDE (for example, name resolution, or e-commerce (web) redirection servers).
- Virtualization components such as virtual machines, virtual switches/routers, virtual appliances, virtual applications/desktops, and hypervisors.
- Cloud infrastructure and components, both external and on premises, and including instantiations of containers or images, virtual private clouds, cloud-based identity and access management, CDEs residing on premises or in the cloud, service meshes with containerized applications, and container orchestration tools.
- Network components, including but not limited to network security controls, switches, routers, CDE network devices, wireless access points, network appliances, and other security appliances.
- Server types, including but not limited to web, application, database, authentication, mail, proxy, Network Time Protocol (NTP), and Domain Name System (DNS).
- End-user devices, such as computers, laptops, workstations, administrative workstations, tablets, and mobile devices.
- Printers, and multi-function devices that scan, print, and fax.
- Storage of account data in any format (for example, paper, data files, audio files, images, and video recordings).
- Applications, software, and software components, serverless applications, including all purchased, subscribed (for example, Software-as-a-Service), bespoke and custom software, including internal and external (for example, Internet) applications.
- Tools, code repositories, and systems that implement software configuration management or for deployment of objects to the CDE or to systems
 that can impact the CDE.

For each in-scope system component type, even if it resides within another system component, list below with each component with different roles, vendors, or make/model/version on separate rows. If extra rows are needed, document that separately and consult with the entity to which this SAQ will be submitted about how to provide that information.

Type of System Component For example, application, firewall, server, IDS, Anti-malware software, database, etc.	Total number of system components How many system components of this type are in scope	Vendor	Product Name and Version	Role/ Function Description

Quarterly Scan Results

In the table below identify each quarterly ASV scan performed within the last 12 months.

Note: It is not required that four passing quarterly scans must be completed for initial PCI DSS compliance if the assessor verified:

- The most recent scan result was a passing scan,
- The entity has documented policies and procedures requiring quarterly scanning going forward, and
- Any vulnerabilities noted in the initial scan have been corrected as shown in a re-scan.

For subsequent years after the initial PCI DSS review, four passing quarterly scans must have occurred.

Date of the scan(s)	Name of ASV that performed the scan	found that	ulnerabilities resulted in a tial scan?	For all scans resulting in a Fail, provide date(s) of re-scans showing that the vulnerabilities have been corrected
		Yes	No	
Indicate whether this is the a	ssessed entity's initial PCI DSS	compliance va	lidation	☐ Yes ☐ No

Scan must cover all extern Vendors (ASV) Program G	,	ng) IP address	ses in existenc	e at the entity, in accordance with the PCI DSS Approved Scanning
	nd the entity completed the Attest accessible (Internet-facing) IP a oped for the ASV scans?			☐ Yes ☐ No

Section 2b: Self-Assessment Questionnaire D for Service Providers

Note: The following requirements mirror the requirements in the PCI DSS Requirements and Testing Procedures document.

Self-assessment completion date: YYYY-MM-DD

Build and Maintain a Secure Network and Systems

Requirement 1: Install and Maintain Network Security Controls

	PCI DSS Requirement		Expected Testing	Response (Check one response for each requirement)					
				In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place	
1.1 Processes and mechanisms for installing and maintaining network security controls are defined and understood.									
1.1.1	All security policies and operational procedures that are identified in Requirement 1 are:	Examine documentation.Interview personnel.							
	Documented. Kept up to dete		·	Describe results as instructed in "Requirement Responses" (page v)					
	Kept up to date.In use.Known to all affected parties.								
1.1.2	Roles and responsibilities for performing activities in Requirement 1 are documented, assigned, and	Examine documentation. Interview responsible personnel.							
	understood.		Describe results as instructed in "Requirement Responses" (page v)						
1.2 Netv	vork security controls (NSCs) are configured and maintained	d.							
1.2.1	Configuration standards for NSC rulesets are: • Defined.	•	Examine configurations standards.						
	Implemented. Maintained.	•	Examine configuration settings.	Describe res	ults as instruct	ed in "Requirei	ment Respons	es" (page v)	

[•] Refer to the "Requirement Responses" section (page v) for information about these response options.

				Check one res	Response	ch requiremen	n t)		
	PCI DSS Requirement	Expected Testing	In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place		
1.2.2	All changes to network connections and to configurations of NSCs are approved and managed in accordance with the change control process defined at Requirement 6.5.1.	Examine documented procedures. Examine network configurations. Examine change control records. Interview responsible personnel.							
	Applicability Notes		Describe results as instructed in "Requirement Responses" (page v)						
	Changes to network connections include the addition, removal, or modification of a connection. Changes to NSC configurations include those related to the component itself as well as those affecting how it performs its security function.								
1.2.3	An accurate network diagram(s) is maintained that shows all connections between the CDE and other networks, including any wireless networks.	Examine network diagrams. Examine network configurations. Interview responsible personnel.							
	Applicability Notes	Applicability Notes			Describe results as instructed in "Requirement Responses" (page v)				
	A current network diagram(s) or other technical or topological solution that identifies network connections and devices can be used to meet this requirement.								

	PCI DSS Requirement	Expected Testing	(Check one re	Response *	ch requiremen	nt)	
	- Constant Control of the Control of	Exposion rooming	In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place	
1.2.4	 meets the following: Shows all account data flows across systems and networks. Updated as needed upon changes to the environment. 	 Examine data flow diagrams. Observe network configurations. Examine documentation. Interview responsible personnel. 						
	Applicability Notes		Describe results as instructed in "Requirement Responses" (page v)					
	A data-flow diagram(s) or other technical or topological solution that identifies flows of account data across systems and networks can be used to meet this requirement.							
1.2.5	All services, protocols and ports allowed are identified, approved, and have a defined business need.	Examine documentation.						
		Examine configuration settings.	Describe results as instructed in "Requirement Responses" (page v)					
1.2.6	Security features are defined and implemented for all	Examine documentation.						
	services, protocols, and ports that are in use and considered to be insecure, such that the risk is mitigated.	Examine configuration settings.	Describe results as instructed in "Requirement Responses" (page v)

	Applicability Notes			sults as instruc	ted in "Require	ment Respons	ses" (page v)	
	The requirement for MFA for non-console administrative access applies to all personnel with elevated or increased privileges accessing the CDE via a non-console connection—that is, via logical access occurring over a network interface rather than via a direct, physical connection.							
	MFA is considered a best practice for non-console admir system components that are not part of the CDE.	nistrative access to in-scope						

					Response*		
	PCI DSS Requirement	Expected Testing	(1	Check one res		ch requiremen	nt)
			In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place
8.4.2	MFA is implemented for all access into the CDE.	 Examine network and/or system configurations. Observe personnel logging in to the CDE. Examine evidence. 					
	Applicability Notes		Describe res	sults as instruct	ted in "Require	ment Respons	es" (page v)
	This requirement does not apply to:						
	Application or system accounts performing automated functions.						
	User accounts on point-of-sale terminals that have access to only one card number at a time to facilitate a single transaction (such as IDs used by cashiers on point-of-sale terminals).						
	MFA is required for both types of access specified in Rec Therefore, applying MFA to one type of access does not instance of MFA to the other type of access. If an individual network via remote access, and then later initiates a cont the network, per this requirement the individual would aut when connecting via remote access to the entity's networn non-console administrative access from the entity's networn.	replace the need to apply another ual first connects to the entity's nection into the CDE from within thenticate using MFA twice, once rk and once when connecting via					
	The MFA requirements apply for all types of system components, including cloud, hosted systems, and on-premises applications, network security devices, workstations, servers, and endpoints, and includes access directly to an entity's networks or systems as well as web-based access to an application or function.						
	MFA for remote access into the CDE can be implemented at the network or system/application level; it does not have to be applied at both levels. For example, if MFA is used when a user connects to the CDE network, it does not have to be used when the user logs into each system or application within the CDE.						
	This requirement is a best practice until 31 March 2025, a must be fully considered during a PCI DSS assessment	after which it will be required and					

	PCI DSS Requirement	Expected Testing	(1	Check one res	Response •	ch requiremer	nt)
	r or 200 Roquirollion		In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place
8.4.3	 MFA is implemented for all remote network access originating from outside the entity's network that could access or impact the CDE as follows: All remote access by all personnel, both users and administrators, originating from outside the entity's network. All remote access by third parties and vendors. 	 Examine network and/or system configurations for remote access servers and systems. Observe personnel (for example, users and administrators) connecting remotely to the network. 					
	Applicability Notes		Describe res	sults as instruct	ed in "Require	ment Respons	ses" (page v)
	The requirement for MFA for remote access originating for applies to all user accounts that can access the network access leads to or could lead to access into the CDE.						
	If remote access is to a part of the entity's network that is properly segmented from the CDE, such that remote users cannot access or impact the CDE, MFA for remote access to that part of the network is not required. However, MFA is required for any remote access to networks with access to the CDE and is recommended for all remote access to the entity's networks.						
	The MFA requirements apply for all types of system com systems, and on-premises applications, network security and endpoints, and includes access directly to an entity's web-based access to an application or function.	devices, workstations, servers,

11.3.1.2	Internal vulnerability scans are performed via authenticated scanning as follows:						,
	Systems that are unable to accept credentials for authenticated scanning are documented.	Examine documentation.Examine scan tool					
	 Sufficient privileges are used for those systems that accept credentials for scanning. 	configurations. Examine scan report results. Interview personnel. Examine accounts used for authenticated scanning.					
	 If accounts used for authenticated scanning can be used for interactive login, they are managed in accordance with Requirement 8.2.2. 						
	Applicability Notes		Describe res	sults as instruc	ted in "Require	ment Respons	ses" (page v)
	"Sufficient" privileges are those needed to access system resources such that a thorough scan can be conducted that detects known vulnerabilities. This requirement does not apply to system components that cannot accept credentials for scanning. Examples of systems that may not accept credentials for scanning include some network and security appliances, mainframes, and containers. This requirement is a best practice until 31 March 2025, after which it will be required and must be fully considered during a PCI DSS assessment.						
11.3.1.3	 Internal vulnerability scans are performed after any significant change as follows: High-risk and critical vulnerabilities (per the entity's vulnerability risk rankings defined at Requirement 6.3.1) are resolved. Rescans are conducted as needed. Scans are performed by qualified personnel and organizational independence of the tester exists (not required to be a QSA or ASV). 	 Examine change control documentation. Interview personnel. Examine internal scan and rescan report as applicable. Interview personnel. 					
	Applicability Notes		Describe res	sults as instruc	ted in "Require	ment Respons	ses" (page v)

	incorporate industry developments.	Examine the security incident	Describe res	sults as instruc	ted in "Require	ment Respons	ses" (page v)
		response plan. Interview responsible personnel.					
12.10.7	Incident response procedures are in place, to be initiated upon the detection of stored PAN anywhere it is not expected, and include:	Examine documented incident response procedures. Interview personnel.					
	Determining what to do if PAN is discovered outside the CDE, including its retrieval, secure deletion, and/or migration into the currently defined CDE, as applicable.	Examine records of response actions.					
	Identifying whether sensitive authentication data is stored with PAN.						
	Determining where the account data came from and how it ended up where it was not expected.						
	Remediating data leaks or process gaps that resulted in the account data being where it was not expected.						
	Applicability Notes		Describe results as instructed in "Requirement Responses" (page v)				
	This requirement is a best practice until 31 March 2025, after which it will be required and must be fully considered during a PCI DSS assessment.						

Appendix A: Additional PCI DSS Requirements

Appendix A1: Additional PCI DSS Requirements for Multi-Tenant Service Providers

	PCI DSS Requirement	Expected Testing	((Check one res	Response •	ch requiremer	nt)
			In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place
A1.1 Mult	1.1 Multi-tenant service providers protect and separate all customer environments and data.						
A1.1.1	Logical separation is implemented as follows: The provider cannot access its customers' environments without authorization. Customers cannot access the provider's environment without authorization.	 Examine documentation. Examine system and network configurations. Interview responsible personnel. 					
	Applicability Notes			ults as instruct	ed in "Require	ment Respons	ses" (page v)
	This requirement is a best practice until 31 March 2025, must be fully considered during a PCI DSS assessment						
A1.1.2	Controls are implemented such that each customer	Examine documentation.					
	only has permission to access its own cardholder data and CDE.	Examine system configurations.	Describe res	ults as instruct	ed in "Requirei	ment Respons	ses" (page v)
A1.1.3	Controls are implemented such that each customer can only access resources allocated to them.	Examine customer privileges.	Describe res	ults as instruct	ed in "Require	ment Respons	Ses" (page v)

[•] Refer to the "Requirement Responses" section (page v) for information about these response options.

	PCI DSS Requirement	Expected Testing	(0	Check one res	Response *	ch requiremer	nt)
	<u> </u>		In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place
A1.1.4	The effectiveness of logical separation controls used to separate customer environments is confirmed at least once every six months via penetration testing.	Examine the results from the most recent penetration test.					
	Applicability Notes The testing of adequate separation between customers in a multi-tenant service provider environment is in addition to the penetration tests specified in Requirement 11.4.6.		Describe res	ults as instruct	ed in "Require	ment Respons	es" (page v)
	This requirement is a best practice until 31 March 2025, after which it will be required and must be fully considered during a PCI DSS assessment.						
A1.2 Mul	ti-tenant service providers facilitate logging and incident res	ponse for all customers.					
A1.2.1	Audit log capability is enabled for each customer's environment that is consistent with PCI DSS	Examine documentation.					
	Requirement 10, including:	Examine system configuration settings.	Describe res	ults as instruct	ed in "Require	ment Respons	es" (page v)
	Logs are enabled for common third-party applications.	-					
	Logs are active by default.						
	 Logs are available for review only by the owning customer. 						
	 Log locations are clearly communicated to the owning customer. 						
	Log data and availability is consistent with PCI DSS Requirement 10.						
A1.2.2	Processes or mechanisms are implemented to support	Examine documented procedures.					
	and/or facilitate prompt forensic investigations in the event of a suspected or confirmed security incident for any customer.	procedures.	Describe res	ults as instruct	ed in "Require	ment Respons	ses" (page v)

	PCI DSS Requirement		PCI DSS Requirement Expected Testing		Response • (Check one response for each requirement)				
				In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place	
A1.2.3	Processes or mechanisms are implemented for reporting and addressing suspected or confirmed security incidents and vulnerabilities, including: • Customers can securely report security incidents and vulnerabilities to the provider. • The provider addresses and remediates suspected or confirmed security incidents and vulnerabilities according to Requirement 6.3.1.	•	Examine documented procedures. Interview personnel.						
	Applicability Notes			Describe resu	ults as instructe	ed in "Require	ment Respons	es" (page v)	
	This requirement is a best practice until 31 March 2025, must be fully considered during a PCI DSS assessment.	er which it will be required and							

Appendix A2: Additional PCI DSS Requirements for Entities using SSL/Early TLS for Card-Present POS POI Terminal Connections

	PCI DSS Requirement Expected Testing		Response ⁴ (Check one response for each requirement)					
	,		In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place	
A2.1 POI	terminals using SSL and/or early TLS are not susceptible	e to known SSL/TLS exploits.						
A2.1.1	Where POS POI terminals at the merchant or payment acceptance location use SSL and/or early TLS, the entity confirms the devices are not susceptible to any known exploits for those protocols.	Examine documentation (for example, vendor documentation, system/network configuration details) that verifies the devices are not susceptible to any known exploits for SSL/early TLS.						
	Applicability Notes			sults as instruc	ted in "Require	ement Respons	ses" (page v)	
	This requirement is intended to apply to the entity with the POS POI terminal, such as a merchant. This requirement is not intended for service providers who serve as the termination or connection point to those POS POI terminals. Requirements A2.1.2 and A2.1.3 apply to POS POI service providers.							
	The allowance for POS POI terminals that are not curre currently known risks. If new exploits are introduced to susceptible, the POS POI terminals will need to be upd	which POS POI terminals are

	PCI DSS Requirement	Expected Testing	(1	Response • (Check one response for each requirement)				
		=//pooton rooming	In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place	
A2.1.2	Additional requirement for service providers only:	Review the documented Risk						
	All service providers with existing connection points to POS POI terminals that use SSL and/or early TLS as defined in A2.1 have a formal Risk Mitigation and Migration Plan in place that includes:	Mitigation and Migration Plan.						
	Description of usage, including what data is being transmitted, types and number of systems that use and/or support SSL/early TLS, and type of environment.							
	Risk-assessment results and risk-reduction controls in place.							
	Description of processes to monitor for new vulnerabilities associated with SSL/early TLS.							
	Description of change control processes that are implemented to ensure SSL/early TLS is not implemented into new environments.							
	Overview of migration project plan to replace SSL/early TLS at a future date.							
	Applicability Notes		Describe res	sults as instruc	ted in "Require	ment Respons	ses" (page v)	
	This requirement applies only when the entity being ass	sessed is a service provider.						
A2.1.3	Additional requirement for service providers only:	Examine system configurations.						
	All service providers provide a secure service offering.	Examine supporting documentation.						
	Applicability Notes		Describe results as instructed in "Requirement Responses" (page v)					
	This requirement applies only when the entity being ass	sessed is a service provider.						

Appendix A3: Designated Entities Supplemental Validation (DESV)

This Appendix applies only to entities designated by a payment brand(s) or acquirer as requiring additional validation of existing PCI DSS requirements. Entities required to validate to this Appendix should use the DESV Supplemental Reporting Template and Supplemental Attestation of Compliance for reporting and consult with the applicable payment brand and/or acquirer for submission procedures.

Appendix B: Compensating Controls Worksheet

This Appendix must be completed to define compensating controls for any requirement where In Place with CCW was selected.

Note: Only entities that have a legitimate and documented technological or business constraint can consider the use of compensating controls to achieve compliance.

Refer to Appendices B and C in PCI DSS for information about compensating controls and guidance on how to complete this worksheet.

Requirement Number and Definition:

		Information Required	Explanation
1.	Constraints	Document the legitimate technical or business constraints precluding compliance with the original requirement.	
2.	Definition of Compensating Controls	Define the compensating controls: explain how they address the objectives of the original control and the increased risk, if any.	
3.	Objective	Define the objective of the original control.	
		Identify the objective met by the compensating control.	
		Note: This can be, but is not required to be, the stated Customized Approach Objective listed for this requirement in PCI DSS.	
4.	Identified Risk	Identify any additional risk posed by the lack of the original control.	
5.	Validation of Compensating Controls	Define how the compensating controls were validated and tested.	
6.	Maintenance	Define process(es) and controls in place to maintain compensating controls.	

Appendix C: Explanation of Requirements Noted as Not Applicable

This Appendix must be completed for each requirement where Not Applicable was selected.

Requirement	Reason Requirement is Not Applicable
Example:	
Requirement 3.5.1	Account data is never stored electronically

Appendix D: Explanation of Requirements Noted as Not Tested

This Appendix must be completed for each requirement where Not Tested was selected.

Requirement	Description of Requirement(s) Not Tested	Describe why the Requirement was Excluded from the Assessment
Examples:		
Requirement 10	No requirements from Requirement 10 were tested.	This assessment only covers requirements in Milestone 1 of the Prioritized Approach.
Requirements 1-8, 10-12	Only Requirement 9 was reviewed for this assessment. All other requirements were excluded.	Company is a physical hosting provider (CO- LO), and only physical security controls were considered for this assessment.

Section 3: Validation and Attestation Details

Part 3. PCI DSS Validation

This A			SAQ D (Section 2), dated (Self-assessment completion date

	assessment, indicate the role primed:	☐ ISA(s) provided other assistance.					
	illiou.	If selected, describe all role(s) performed:					

Part 4. Action Plan for Non-Compliant Requirements

Only complete Part 4 upon request of the entity to which this AOC will be submitted, and only if the Assessment has a Non-Compliant status noted in Section 3.

If asked to complete this section, select the appropriate response for "Compliant to PCI DSS Requirements" for each requirement below. For any "No" responses, include the date the entity expects to be compliant with the requirement and a brief description of the actions being taken to meet the requirement.

PCI DSS Requirement	Description of Requirement	Compliant to PCI DSS Requirements (Select One)		Remediation Date and Actions (If "NO" selected for any
		YES	NO	Requirement)
1	Install and maintain network security controls			
2	Apply secure configurations to all system components			
3	Protect stored account data			
4	Protect cardholder data with strong cryptography during transmission over open, public networks			
5	Protect all systems and networks from malicious software			
6	Develop and maintain secure systems and software			
7	Restrict access to system components and cardholder data by business need to know			
8	Identify users and authenticate access to system components			
9	Restrict physical access to cardholder data			
10	Log and monitor all access to system components and cardholder data			
11	Test security systems and networks regularly			
12	Support information security with organizational policies and programs			
Appendix A1	Additional PCI DSS Requirements for Multi-Tenant Service Providers			
Appendix A2	Additional PCI DSS Requirements for Entities using SSL/Early TLS for Card- Present POS POI Terminal Connections
